

Employee Handbook

Everyday workplace guidance, responsibilities, communication, attendance, WFH, technology, and support

Knowledge-base note: This document is fictional sample company policy content created for the WorkMate AI RAG demonstration. Employees should follow the actual company's approved procedures where they differ.

1. About This Handbook

This handbook provides general workplace guidance for employees and explains where to seek help for common questions.

Department-specific policies may provide additional requirements. When policies conflict, employees should follow the current approved policy and ask HR for clarification.

2. Employee Responsibilities

Employees are expected to perform assigned work, communicate professionally, protect company information, follow attendance procedures, and raise problems promptly.

Employees should provide accurate information when creating HR, IT, or Facilities requests.

3. Working Hours

Employees should follow their assigned working schedule and remain available during required hours.

Any schedule change, late arrival, early departure, or absence should be communicated through the appropriate process.

4. Attendance

Employees should record punch-in and punch-out events accurately.

If an employee forgets a punch-out or lunch punch, the employee should report it promptly for correction.

Employees should never ask another person to record attendance for them.

5. Work From Home

WFH requires eligibility and approval unless an authorized emergency arrangement applies.

Employees working remotely should remain reachable, attend meetings, protect company information, and follow required attendance events.

Employees should not assume that submitting a WFH request means the request is approved.

6. Leave

Leave should be requested through the approved process. Unexpected absence should be reported as soon as practical.

Employees can use WorkMate to check supported leave balances, create HR requests, and track request status.

7. Communication

Employees should use approved channels for workplace communication and should provide enough context when reporting an issue.

Urgent attendance, security, safety, or system problems should be reported promptly rather than waiting for a routine meeting.

8. Workplace Conduct

Employees should communicate respectfully and avoid harassment, threats, discrimination, intimidation, or deliberate disruption.

Concerns about workplace conduct should be directed to the appropriate manager, HR, or designated reporting channel.

9. Company Equipment

Company devices should be used responsibly and protected from unauthorized access.

Lost, stolen, damaged, or malfunctioning equipment should be reported to IT promptly.

10. Privacy and Confidentiality

Employees should protect personal information, credentials, internal documents, and confidential business information.

Sensitive company information should not be pasted into unapproved external tools or shared with unauthorized people.

11. Security Awareness

Employees should be cautious with unexpected emails, links, attachments, login requests, and MFA prompts.

Security incidents should be reported promptly to the appropriate IT or Security contact.

12. Raising Employee Requests

WorkMate can help employees search approved policies, check supported information, create supported tickets or requests, and track request IDs.

Requests requiring authorization may enter a human approval workflow.

13. Request Tracking

Employees should keep the request ID returned by WorkMate. The ID can be used to ask for the current status.

History may contain requests with statuses such as Pending, Approved, Rejected, Open, In Progress, and Closed.

14. When WorkMate Cannot Answer

WorkMate should use approved policy information and supported employee data. If the question is ambiguous, outside the available policies, or requires human judgment, the employee may be escalated to HR, IT, or Facilities.

15. Common Employee Questions

Employees may ask how to correct a missed punch, request WFH, check leave, report a laptop issue, report a facilities issue, or find the status of an existing request.

WorkMate should provide the relevant procedure and source rather than inventing a company rule.
