

Facilities & Maintenance Policy

AC, electrical issues, lighting, furniture, cleaning, maintenance tickets, and safety escalation

Knowledge-base note: This document is fictional sample company policy content created for the WorkMate AI RAG demonstration. Employees should follow the actual company's approved procedures where they differ.

1. Scope

Facilities support covers office conditions and physical workplace problems such as air conditioning, lighting, electrical issues, furniture, cleaning, and other maintenance concerns.

2. Creating a Maintenance Request

Employees should provide the employee ID, location, issue description, and useful details such as whether the problem affects one workstation or an entire room.

WorkMate may create a maintenance request and return a unique ID such as FM-001.

3. AC Not Working

Employees should report the room or area, symptoms, and whether the AC is completely unavailable or operating abnormally.

Employees should not open AC equipment, manipulate electrical connections, or attempt repairs themselves.

4. AC Too Hot or Too Cold

If an area is consistently uncomfortable, employees should report the room and approximate temperature issue to Facilities.

Employees should avoid changing electrical controls or equipment settings beyond normal user controls.

5. Electrical Problems

Burning smells, sparks, exposed wires, damaged sockets, or other electrical hazards should be reported immediately.

Employees should not touch damaged electrical equipment or attempt repairs.

6. Lighting Problems

Failed lights should be reported with the room or location.

If the problem involves exposed wiring, sparks, or another safety hazard, the issue should be treated as urgent and escalated immediately.

7. Furniture Problems

Broken chairs, desks, drawers, cabinets, or other furniture should be reported with the location and description.

Employees should not continue using furniture that is visibly unsafe.

8. Cleaning and Common Areas

Employees can report cleaning problems by identifying the location and issue.

Repeated or serious hygiene concerns should be escalated to Facilities or the designated workplace contact.

9. Water Leaks and Other Building Issues

Water leaks, damaged ceilings, blocked passages, or other building problems should be reported promptly.

If the issue creates an immediate safety risk, employees should move away from the affected area and contact the appropriate human support.

10. Maintenance Ticket Lifecycle

Typical statuses include Open, In Progress, Pending, and Closed.

Open means the request has been created. In Progress means Facilities is working on it. Pending means work depends on information, access, scheduling, or materials. Closed means the maintenance workflow has been completed.

11. Checking Maintenance Status

Employees can provide a maintenance request ID to check its status or ask WorkMate to show their open requests.

If the issue remains after closure, the employee should contact Facilities and reference the original request ID.

12. Duplicate Requests

Employees should avoid creating multiple tickets for the same problem. If an existing request covers the issue, the employee should use the existing request ID.

13. Urgent Facilities Issues

Electrical hazards, serious water leaks, blocked emergency routes, major structural concerns, or other immediate safety risks should be escalated to a human Facilities or safety contact.

WorkMate should not provide instructions for employees to perform unsafe repairs.

14. Common Employee Questions

The office AC is not working. What should I do?

Create a maintenance request with the room/location and symptoms. Do not attempt repairs.

How do I check my maintenance request?

Provide the FM request ID or ask WorkMate for your open requests.

My chair is broken. Can I fix it myself?

Report it to Facilities rather than attempting an unsafe repair.

There is a burning smell near an electrical socket. What should I do?

Move away from the hazard and contact Facilities or the appropriate safety contact immediately.

15. Facilities and Human Escalation

When an issue involves immediate safety risk, unusual circumstances, or information not covered by the policy, WorkMate should direct the employee to a human Facilities or safety contact.
