

WorkMate AI — Security Policy

Page 1 of 5

Purpose: This fictional policy establishes basic information-security practices for WorkMate employees.

Employees must protect company credentials, devices, documents, and confidential information.

Security controls should not be bypassed for convenience.

Potential security incidents should be reported promptly through the approved process.

This document is fictional and created for WorkMate AI RAG testing.

WorkMate AI — Passwords and Authentication

Page 2 of 5

Employees must keep passwords, one-time codes, and authentication secrets private.

Passwords should not be shared through chat, email, tickets, or documents.

Employees should use approved authentication methods for company systems.

If credentials may have been exposed, the employee should report the incident and follow the approved reset process.

Support staff should use approved verification procedures rather than requesting secret credentials.

WorkMate AI — Phishing and Suspicious Messages

Page 3 of 5

Employees should treat unexpected requests for credentials, payments, or confidential information with caution.

Suspicious links or attachments should not be opened when the sender or request cannot be trusted.

Potential phishing messages should be reported using the approved security reporting channel.

Employees should not forward suspicious content unnecessarily to other employees.

Security teams may investigate reported messages and provide further instructions.

WorkMate AI — Data and Device Protection

Page 4 of 5

Company information should only be shared with authorized recipients and approved systems.

Employees should lock or secure company devices when unattended.

Sensitive files should not be copied to unauthorized personal storage.

Lost or stolen company devices should be reported promptly.

Employees should follow retention and access rules applicable to their team.

WorkMate AI — Incident Reporting

Page 5 of 5

Examples of incidents include suspected credential exposure, phishing, lost devices, unauthorized access, and accidental data disclosure.

When reporting an incident, provide the known facts without attempting to conceal the problem.

Do not independently investigate beyond what is safe and authorized.

Security incidents may require coordination between IT, security, HR, or management.

Document status: Fictional WorkMate AI project security policy for RAG testing; not a real security standard.
